MASK with VIBRACHROM

Is the new colour conditioning system
that delivers more shine and long lasting colour
thanks to the innovative spirit of Davines laboratories
to combine nature with the latest technologies in cosmetics and textiles.

Mask with Vibrachrom™ is a permanent colour offering professional hair colourists complete versatility whether covering white hair, reflect changing, darkening or lightening up to three levels. Additional lightening of up to four levels, and further creative possibilities, become possible with the use of Lightening Booster 000 and the Extralift series offers up to five levels of lightening. Mask with Vibrachrom™ allows superior, uniform colour penetration in to the hair's structure, offers extra shine, high conditioning effect and outstanding duration of the colour.

Mask with Vibrachrom™ comes with a dedicated range of Activators (5, 10, 20, 30 and 40 volume).

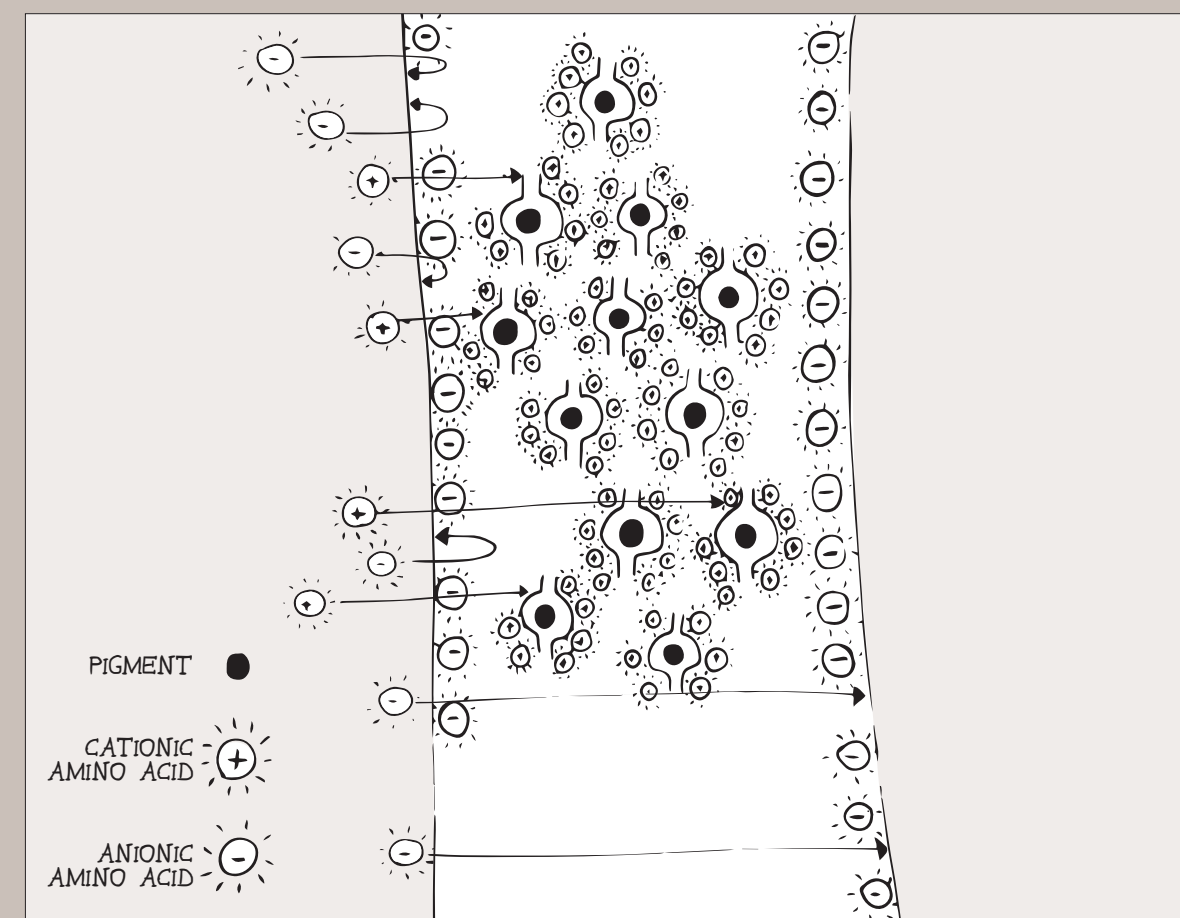

Emissions from Mask with Vibrachrom™ packaging production are compensated by participating in reforestation projects. The quantity of packaging material used has been reduced as much as possible, eliminating any unnecessary material and thus optimizing transportation, further reducing CO₂ emissions. The packaging is made of FSC recycled paper and is compostable.

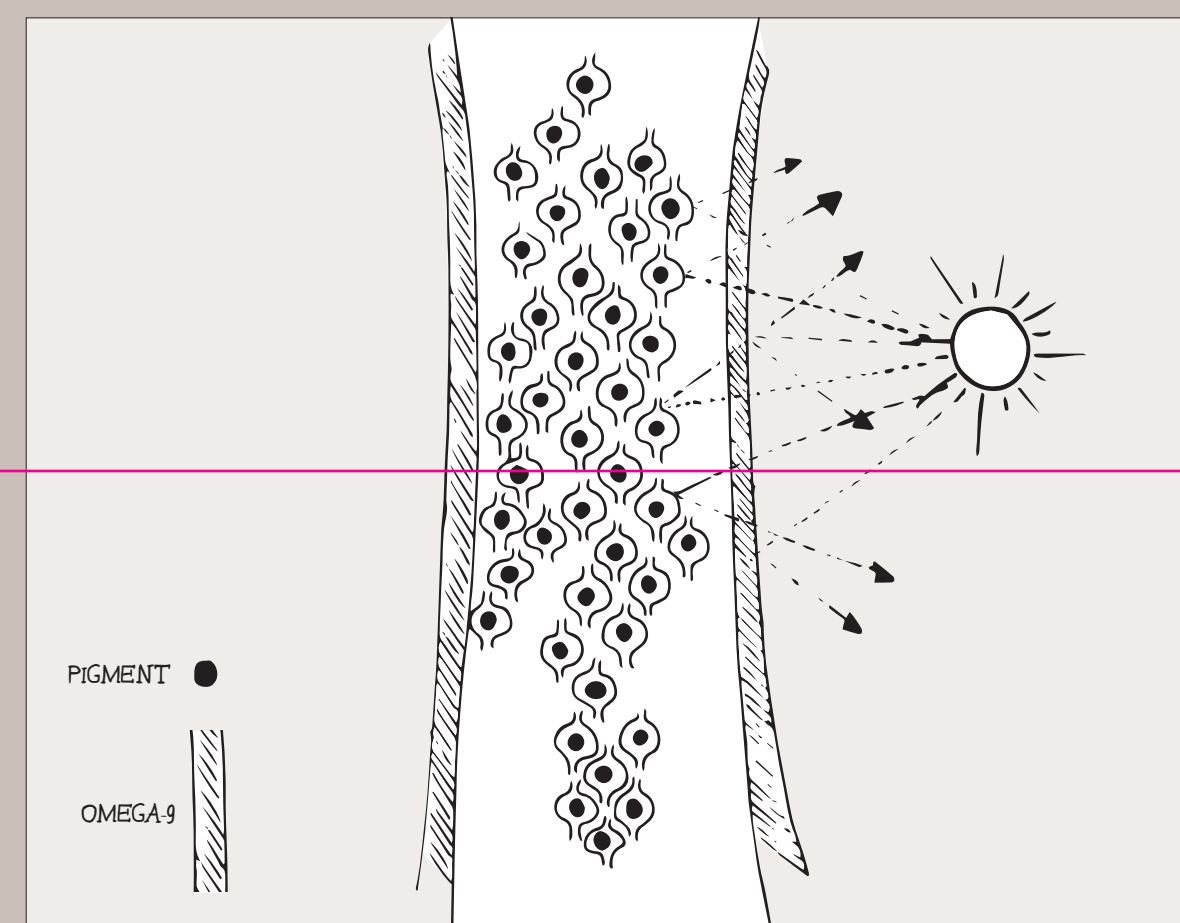

QUINOA PROTEIN EXTRACT, increases colour retention, minimizes oxidative stress thanks to its rich composition of aminoacids and enhances the shine of the hair while compacting the cuticle.

The quinoa that we selected to use in our productions is grown in Peru respecting the local population and territory.

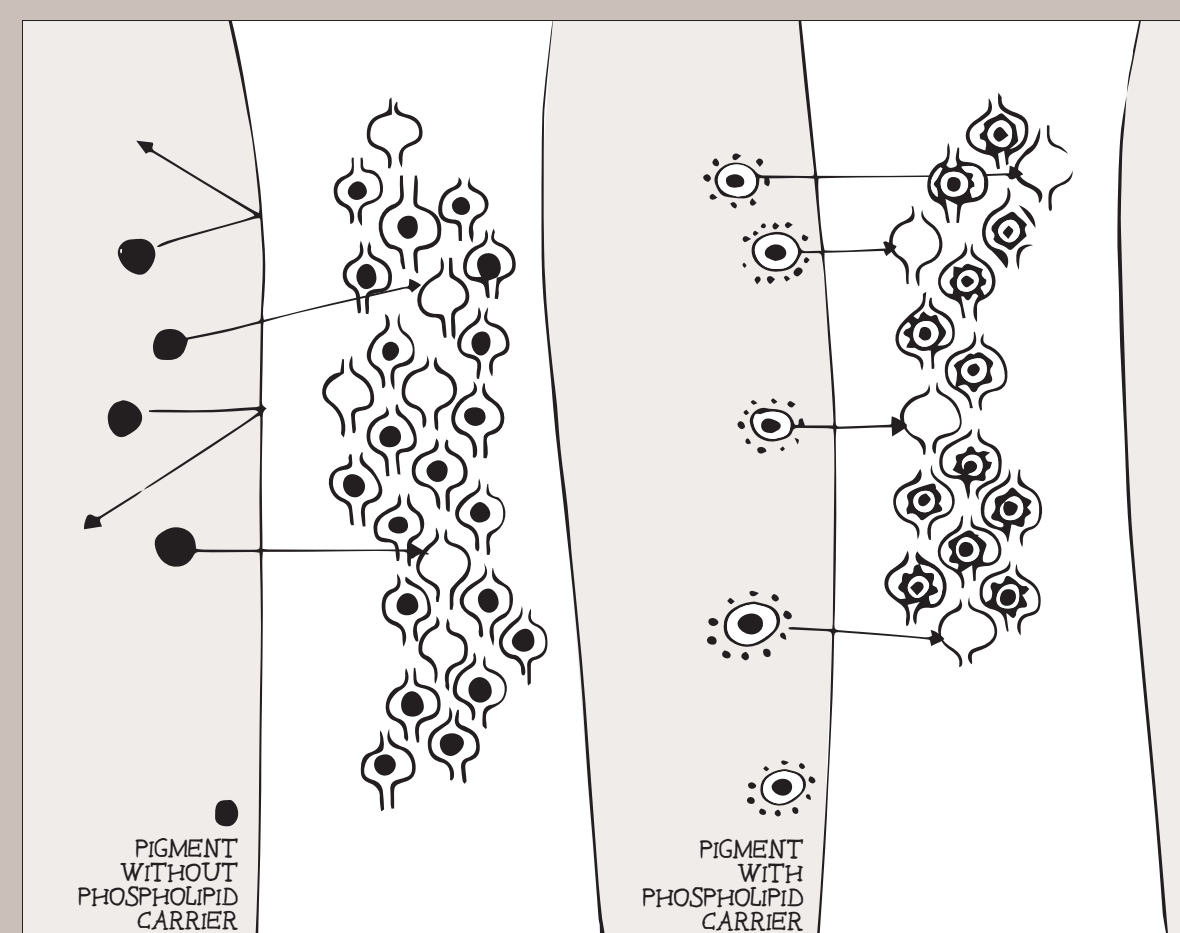

CONDITIONING AGENT RICH IN OMEGA-9 (ω -9) able to form a lipid film that protects, smooths and nourishes hair, compacting it and enhancing inner and outer light refraction.

Omega-9 is a vegetal fatty acid, extracted from plants and has strong nourishing, protecting and elastic properties.

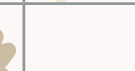

PHOSPHOLIPID CARRIER an active ingredient, never before used in cosmetics, that increases the penetration of pigments into the hair structure for a durable and homogeneous colour and an extraordinary conditioning effect.

From crossover studies with the textile world, we discovered a phospholipid carrier that increases colour intensity even with the most delicate natural fibres of silk and has the same effectiveness on the hair's structure.

NATURALS										
INTENSE NATURALS										
ASH NATURALS										
INTENSE COOL NATURALS										
WARM NATURALS										

The **Natural families (Naturals – Intense Naturals - Ash Naturals – Warm Naturals)** perfectly cover up to 100% white hair. When Mask with Vibrachrom™ reflect nuances are used on more than 50% white hair, follow the instructions below, choosing the most appropriate Natural family and the correct activator to obtain the desired result. The Intense Naturals family offers increased coverage: for fine/normal hair, we recommend using the Activator 20 volume with the standard mixing ratio, while for resistant hair, use Activator 20 volume but increase the natural base. Important tips when using **Intense Cool Naturals**: When used on pigmented hair below 50% white, the result will appear darker due to the intense depth and extra cool reflect. When used on non resistant white hair above 50%, the result may appear darker than expected. When used in foil the shade may appear darker than expected.

HOW TO USE

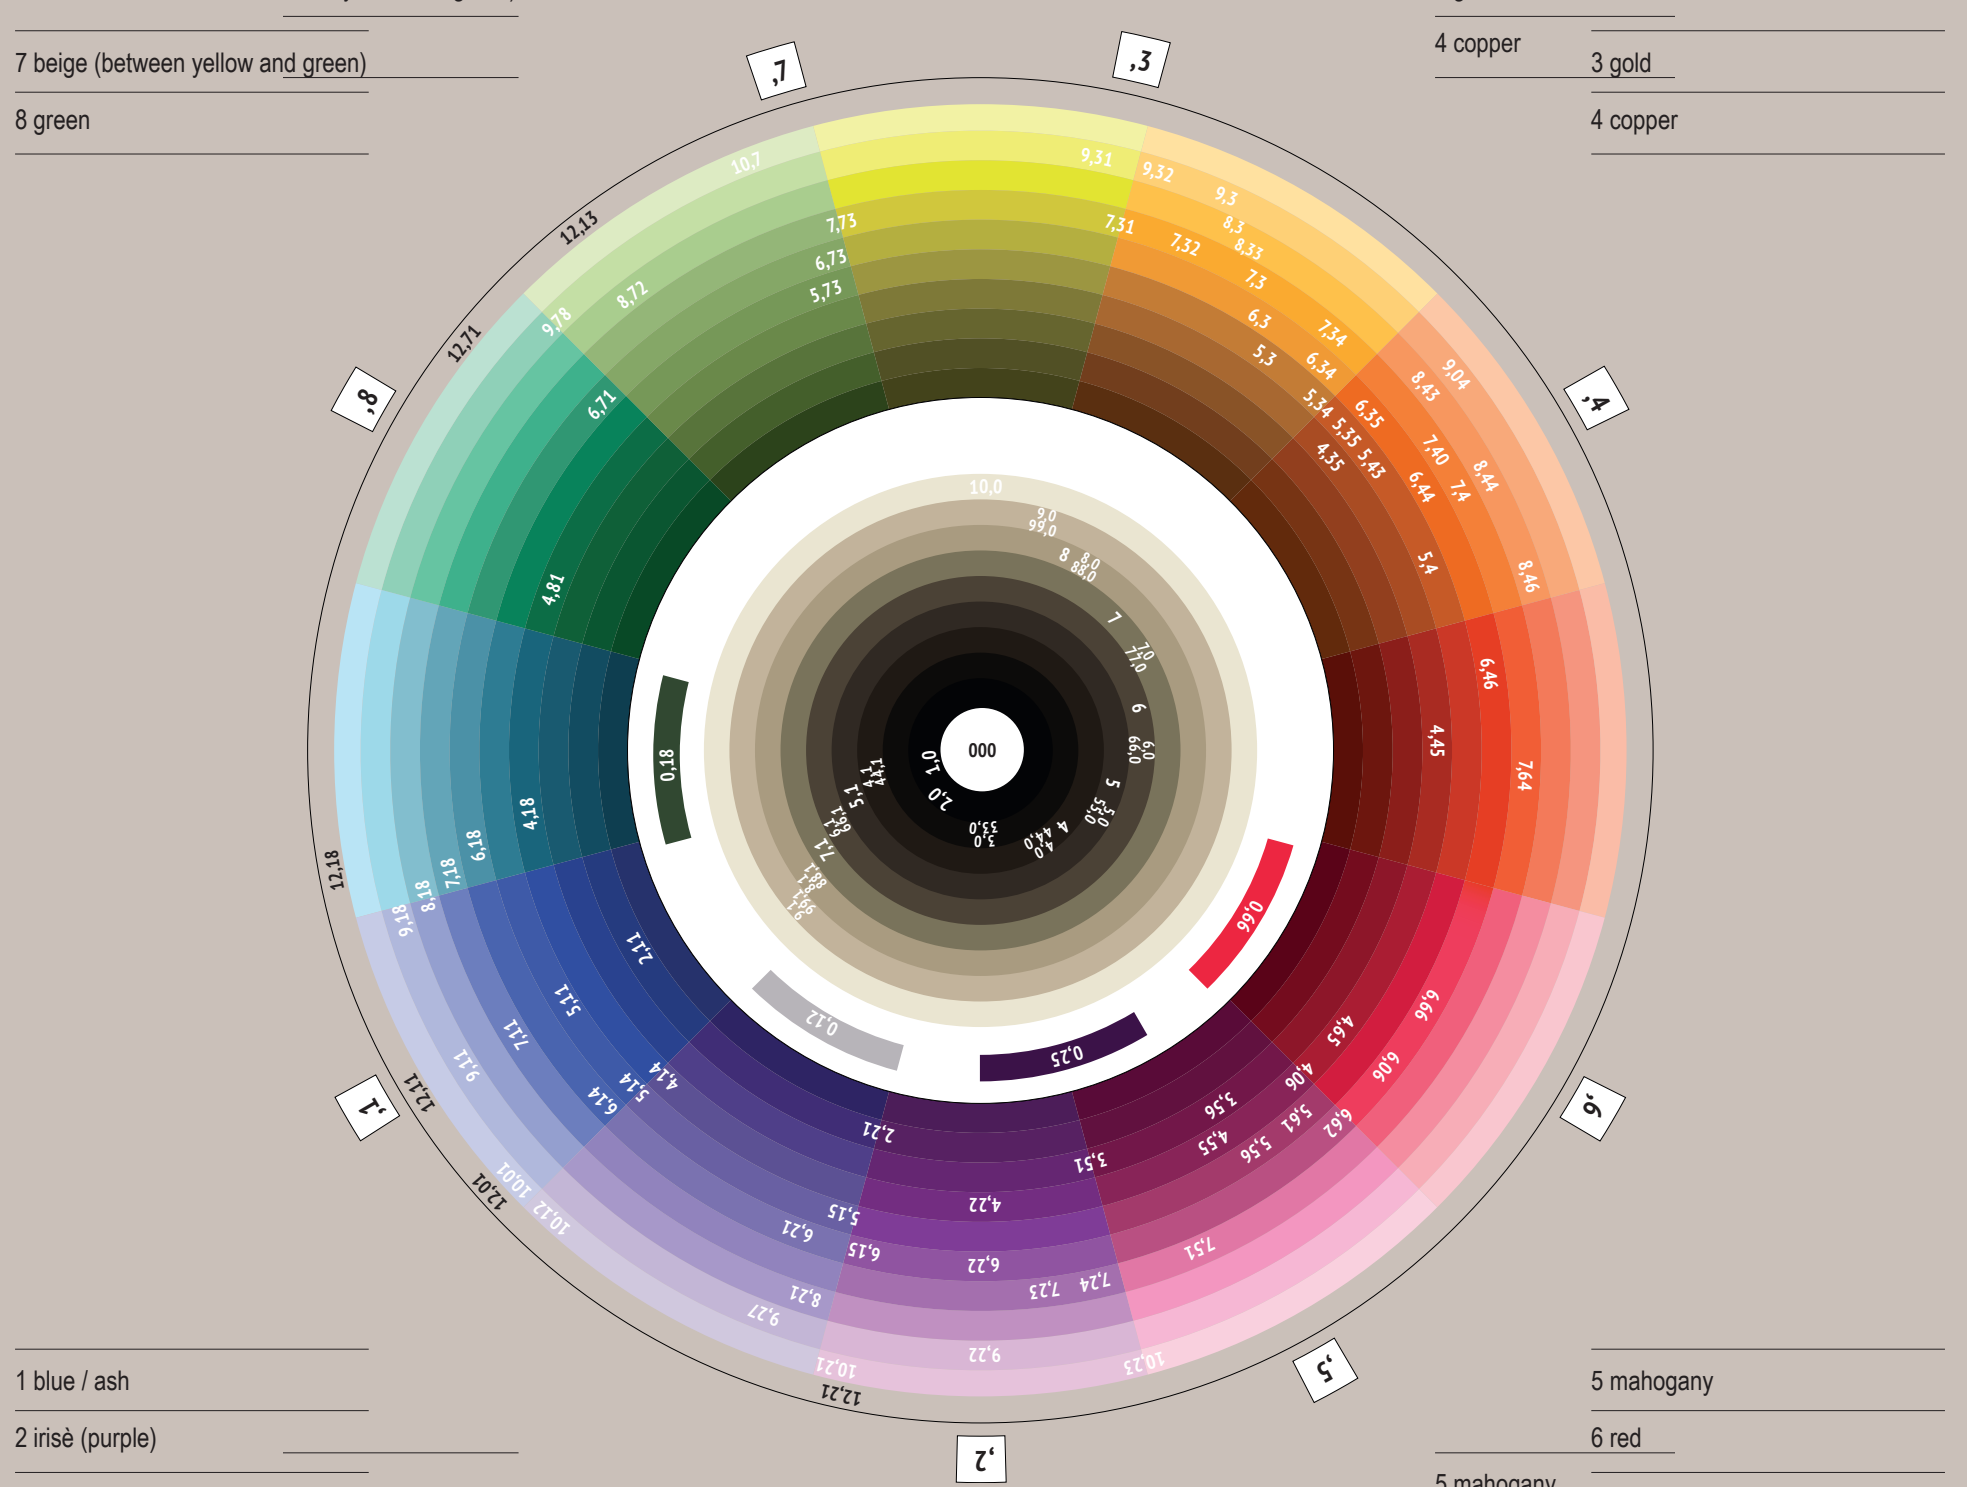

To prepare the mixture, weigh the colour and activator according to the results you wish to obtain.

*standard processing time. Processing time can be extended according to hair type, if necessary.

****it is possible to use Mask with a heat source: processing time will be reduced by 10-15 minutes. Always check the development of the colour result before colour removal.**

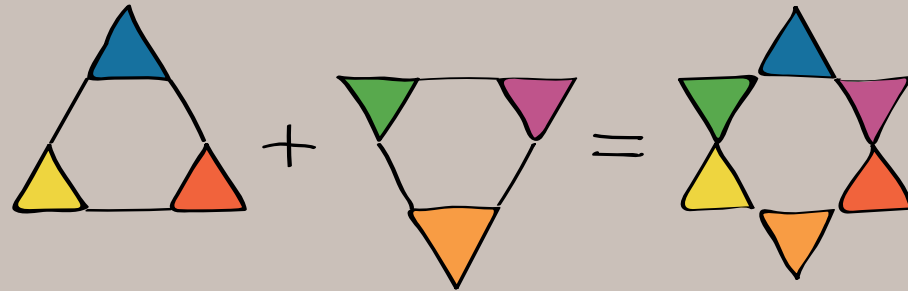

*** the mixing ratio can be extended to 1/2 + 1/2 to increase coverage.

**** the mixing ratio can be extended to $\frac{1}{2} + \frac{1}{2}$ to increase the lightening ability.

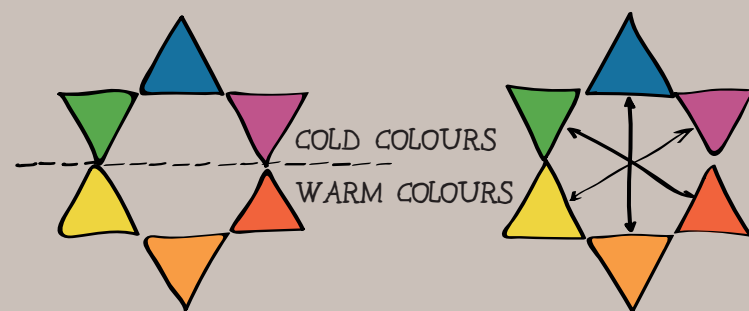

SERVICE		MIXING RATIO	MIXTURE PER APPLICATION	PROCESSING TIME		
				* 	** 	
White hair coverage: Naturals, Intense Naturals, Ash Naturals, Intense Cool Naturals and Warm Naturals		 1:1,5 	50 g colour cream + 75 g Activator 20 vol		 35 MIN	 20 MIN
White hair coverage (>50%): Reflect nuances		 1:1,5 	***16 g natural base + 33 g reflects + 75 g Activator 20 vol		 35 MIN	 20 MIN
Resistent or ethnic white hair coverage: Intense Natural and Intense Cool Naturals (>50%)		 1:1,5 	25 g natural intense base + 25 reflects + 75 g Activator 20 vol		 35 MIN	 20 MIN
Change of reflect		 1:1,5 	50 g colour cream + 75 g Activator 20 vol		 35 MIN	 20 MIN
Darkening		 1:1,5 10  1:1,5 20	50 g colour cream + 75 g Activator 10 or 20 vol		 35 MIN	 20 MIN
Toning		 1:2  5	50 g colour cream + 100 g Activator 5 vol		 1-15 MIN	
Lightening up to 1 level		 1:1,5  20	50 g colour cream + 75 g Activator 20 vol		 35 MIN	 20 MIN
Lightening up to 2 levels		 1:1,5  30	50 g colour cream + 75 g Activator 30 vol		 35 MIN	 20 MIN
Lightening up to 3 levels		 1:1,5  40	50 g colour cream + 75 g Activator 40 vol		 35 MIN	 20 MIN
Lightening up to 4 levels with booster		 1:1,5  40	****16 g 000 + 33 g colour cream + 75 g Activator 40 vol		 35 MIN	 20 MIN
Lightening up to 4 levels with extralift		 1:2  30	50 g extralift + 100 g Activator 30 vol		 50 MIN	 30 MIN

Creative use		1:1,5 10	50 g Intensifiers + 75 g Activator 10 vol		35 MIN	20 MIN

OSTWALD'S COLOUR STAR

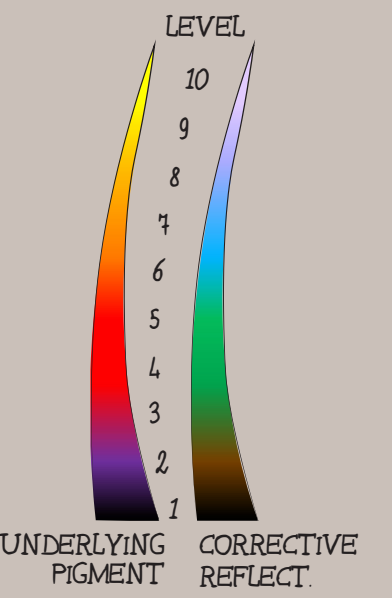

This star provides more information about colour. It identifies the primary colours (yellow, red and blue) and the secondary colours (orange, violet and green). The star helps us to understand the concept of warm and cool colours and 'complementarity'. Dividing the star horizontally, in the upper half there is green, blue and violet which are considered as cool colours. Meanwhile, in the lower half of the star the warm colours of red, yellow and orange are found.

The concept of complementarity refers to the ability of one colour to contrast or neutralize another colour. Precisely, blue and orange are complementary colours because they can neutralize each other. Likewise for violet and yellow, and red and green.

DESIRED COLOUR: with the support of the colour chart, select with the client the desired colour or combination of colours.

NATURAL LEVEL: it is important for the colourist to accurately assess the natural level of the hair. The difference between the natural level of the hair and the level of the desired hair colour is fundamental in selecting the most appropriate Activator strength to be used.

CAUTIONS:

- This product must not be used for dyeing the eyelashes or eyebrows.
- To do so may cause blindness. Rinse eyes immediately if product comes into contact with them.
- For professional use only. Wear suitable gloves. Keep out of reach of children.
- To obtain the correct performance, always follow the mixing instructions as indicated.

SKIN SENSITIVITY TEST

It is always advised to carry out a skin sensitivity test 48 hours before applying the colour to avoid any allergic reaction. Follow the instructions on the leaflet accompanying every box of Mask with Vibrachrom™. Remember that a sensitivity test is a legal requirement in many countries.
