Your complete guide to integrating The Present Time
into your salon and maximizing business success.

MEET THE PRESENT TIME

NEW! DEMI-PERMANENT ALKALINE COLOR SYSTEM

Davines research laboratories have designed an innovative demi-permanent alkaline color that's ammonia-free, low-commitment, delicate on scalp* and offers up to 70% white coverage with tested longevity, reflective shine, and dimensional color results.

Our sustainable formula delivers strengthening with advanced power for enhanced vibrancy, delicate lightening (up to one level of lift and color deposit) and gentle coverage, plus the extra benefit of restoring hair lipid composition to optimize the appearance of hair.

RESTORATION OF HAIR LIPIDS

- Restores the hair lipids by up to 76% after one color service**

COLOR PROTECTION

- Total color protection from UV exposure for up to 4 weeks***
- Color gradually evolves true to tone, naturally and beautifully with up to 24 shampoos†

REINFORCING THE HAIR

- Up to 34% more resistance to breakage††

FEATURES BIOMIMETIC HAIR RESTORING TECHNOLOGY

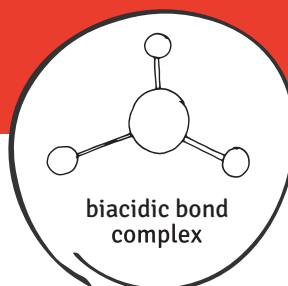

- 1st Davines color line with a **Regenerative Organic Certified** ingredient
- Moisturizes hair shaft both internally and externally

- Protects and strengthens hair fiber
- Provides extra shine and vibrancy

- Increases pigment penetration
- Boosts conditioning effects

- Provides color UV protection
- Protects the hair from oxidative stressors
- Davines Patented Technology

THE REGENERATIVE ORGANIC AGRICULTURE INGREDIENT IMPACT

Regenerative Organic Agriculture is a system of farming principles and practices that seeks to go beyond protection and rehabilitate and enhance the entire ecosystem of the soil. Building upon organic as a baseline, this method of growing food, fiber, and ingredients approaches farming as a holistic system, does not use synthetic pesticides and herbicides, and incorporates high standards for soil health, animal welfare, and farm worker fairness. With a fully traceable supply chain, the regenerative ingredient symbolizes Davines' active commitment to addressing the issues that threaten our planet and represents a concrete initiative in promoting a positive environmental change.

*Dermatologically tested

**Instrumental test performed on a lock of hair by an independent laboratory. Color service: toning after pre-lightening.

***Instrumental test: color applied on hair locks stressed under UV exposure.

†Depending on hair porosity and quality, based on 115 in-vio tests performed by hairdressers.

††Instrumental test: color applied on hair lock vs untreated bleached hair.

HOW TO GET STARTED WITH THE PRESENT TIME

EDUCATION

Make sure all staff members understand the unique qualities of the new color line (ingredients, color range, longevity, and benefits). Make sure to schedule a product training session with your local educator.

INTRODUCE THE NEW COLOR LINE

- Update your color menu services
- Start posting on social media
- Create a salon event with your clients

STOCK THE SALON

Make sure to have sufficient stock with all the nuances of the new color line.

PROMOTE THE NEW COLOR LINE TO CLIENTS

Update your salon website, your salon social media and in-salon signage.

WHO IS THE PERFECT CLIENT FOR THE PRESENT TIME?

1. Wants dimensional color and reflective shine but low commitment
2. Not ready for a permanent color, but needs grey coverage
3. Wants gentle white hair coverage or delicate lightening (Sunkissed effect)
4. Wants an ammonia-free color service

WARM REDS: 6,65 - 7,44 - 8,62 - 8,66 - 9,44

WARM BROWNS: 4,7

SPECIALTIES: RED - VIOLET - BLUE - YELLOW - GREEN

FAQ

1. Can other Davines activators be used with The Present Time color line?

No, this line has been designed to work in synergy with 7 volume and 15 volume Activators only. Using another activator will not achieve the optimal result.

2. Can I use heat?

Yes, but when using a heat source, the development time must be reduced to 15 minutes (instead of 20 minutes without heat). It may result in better white hair coverage.

3. Do I need to shampoo after rinsing The Present Time?

Yes, The Present Time is a demi-permanent alkaline color. Applying shampoo helps the hair return to a non-alkaline pH so the cuticle can close and trap the dyes in the hair shaft (improving the longevity of the color).

4. What is the difference between View and The Present Time?

View is acidic, and The Present Time is alkaline. The color process differs from one to another. An alkaline pH environment opens up the hair cuticles and allows deeper penetration of the dyes, resulting in improved color longevity. Whereas with View, in an acidic pH, the opening of the cuticle is minor, resulting in a softer color deposit.

5. Can The Present Time be applied on shampooed, towel-dried hair?

For toning after pre-lightening, The Present Time must be applied on shampooed, towel-dried hair. It can be done for other services, but the best results are obtained on dry hair application.
